Skills

- Identity & Access Management (IAM)
- Okta
- Cybersecurity Fundamentals
- Authentication & Access Governance
- Docker & Container Technologies
- Linux
- Python
- SPARQL
- Knowledge Graphs
- Semantic Web Technologies
- Security Monitoring
- Agile Methodologies
- Problem Solving & Analytical Thinking

About Me

Computer Engineering graduate currently working at Accenture as an Identity and Access Management (IAM) Engineer within the cybersecurity domain. My work focuses on authentication systems, identity lifecycle management, access governance and secure access control in enterprise environments using technologies such as Okta.

I am particularly interested in cybersecurity operations, cloud security and scalable infrastructures. My academic background includes the development of a Final Degree Project focused on a knowledge graph-based solution for container monitoring and security analysis, aimed at improving traceability and vulnerability detection in dynamic environments using Docker, SPARQL and semantic technologies.

I enjoy solving complex problems, learning new technologies quickly and adapting to challenging technical environments. My goal is to continue growing professionally in cybersecurity, contributing to secure, reliable and scalable systems within innovative teams.

Education

Bachelor's Degree in Computer Engineering

Universidad Politécnica de Madrid

2020 - 2026

- I am a Computer Engineering graduate from Universidad Politécnica de Madrid, where I developed a strong technical background in software engineering, cybersecurity and distributed systems. My Bachelor's Thesis was focused on the creation of knowledge graphs for container monitoring and security analysis, aimed at improving infrastructure visibility, vulnerability traceability and dependency analysis in Docker-based environments through semantic technologies and SPARQL-based analysis.

Experience

IAM - Security Transformation Analyst

Accenture

2025-Present

Currently working within cybersecurity and Identity & Access Management environments, supporting enterprise authentication and access governance processes.

Responsibilities include:

- Identity lifecycle management
- Application migration
- Access governance and least-privilege policies
- IAM platform operations using Okta
- Authentication and authorization workflows
- Security compliance support
- Collaboration in enterprise cybersecurity environments
